(TMI Newsletter – November 2014)

We Hear You've Been Asking
About the Professional Division and the Professional Seminar

Welcome Marilyn Schlitz, PhD, Senior Fellow and President Emeritus of the Institute of Noetic Sciences (IONS), as our 2015 Professional Seminar Keynote Speaker!

What about the PD? What is the Professional Seminar? Here's the scoop: the Professional Division is a corps of frontier scientists and practitioners—a unique group with a longer than 30-year global tradition of breakthrough research and reporting on the Institute's consciousness development technologies. Professional members are responsible for most of the substantial body of work published independently as well as through the *TMI Journal*.

If you use Hemi-Sync®, SAM, or TMI methods in your professional work, you may qualify to become a Professional member. Bob Monroe founded the Professional Division as a way to further ongoing investigation into the application of Hemi-Sync with patients, clients, students and subjects. He was vitally interested in how the technology could be of value in more mainstream health and wellness areas.

Bob also hoped that by shining a light on conventional uses, his methods would become available more widely, and provide benefit beyond the relatively small circle of users focused on the esoteric applications.

The Professional Division has been a tremendous boon to the Institute during the past three-plus decades, with exciting, innovative work being done by members in many countries. The resulting published articles, reports, and studies, many of which are available on our website, have served multiple purposes—

- They have helped “normalize” the notion of consciousness exploration, meditation, and the use of sound technologies within conventional culture.
- They have broadened considerably the health applications of Hemi-Sync and TMI’s methods and techniques.
- They form a body of work that has grounded TMI as a leader among burgeoning consciousness organizations.

In March of 2015 the Professional Seminar will be held here at TMI in Virginia. These conferences are dynamic events open by invitation only to Professional members from around the world who gather to collaborate, share information, deepen their consciousness skills, and catch up on the latest advances in technology. In keeping with Bob’s 2015 centennial the Seminar theme is “The Legacy of Robert A. Monroe.”

We are honored to welcome Marilyn Schlitz, PhD, Senior Fellow and President Emeritus of the Institute of Noetic Sciences (IONS) as our Keynote Speaker.

Dr. Schlitz will discuss her collaboration with Deepak Chopra to develop the concept, film, and book, “Death Makes Life Possible” (trailer below). A showing of the film is included.

If you are using TMI tools and techniques in your work and would like to join this unique and leading-edge group, apply to for Professional Division membership.

See you at the Professional Seminar!
